SUMMARY

Senior Front-end Engineer with 10+ years of experience building web applications with React, Vue.js, and TypeScript, including experience as Technical Leader of a 10-person front-end team. Specialized in data-heavy logistics platforms: top contributor to an enterprise warehouse management system used by clients such as Siemens across Germany, Singapore, Mexico, and Brazil, and builder of a multi-tenant, white-labelled warehouse platform from scratch with React 19 and TanStack Query. Skilled at front-end architecture, dashboard frameworks, and performance optimization, with experience mentoring developers and working directly with international clients.

EXPERIENCE

Senior Front-end Engineer (Freelance) · BBX Intra GmbH

Feb 2026 – Present · Fürth, DE

- Built the front-end from scratch with React 19, TypeScript, Vite, MUI, TanStack Query, React Router v7, and ECharts as the main contributor (~600 commits).
- Designed the multi-tenant architecture: per-warehouse API host resolution at runtime, warehouse-aware routing with seamless switching, and route- and component-level access control derived from a single route map.
- Delivered 10+ operational and reporting dashboards (Live Ops, SLA & Service Quality, Productivity, Picking Tour Cockpit, Storage Occupancy, Inbound/Outbound), including drill-down from charts to orders and order lines, on a reusable KPI widget framework with period aggregation, working-day calendars, warehouse-specific targets, export, and shareable URL-based dialog state.
- Built the authentication layer with queued token refresh via Axios interceptors and session-expiry handling, and bulk CSV/XLSX import tools with configurable data mapping and upload progress.
- Implemented per-brand white-labelling with CSS variables and lazy-loaded English/German translations, plus a CI check that detects out-of-sync i18n keys.
- Improved performance and maintainability: cut the entry chunk by 549 kB (180 kB gzipped) by switching ECharts to selective, tree-shaken imports on top of route-level code splitting, rewrote the in-house virtualized data table, custom-built without third-party grid libraries, around typed columns, drove the JavaScript-to-TypeScript migration (~75% of the codebase), and enforced a layered architecture with ESLint rules.

Senior Front-end Engineer (Freelance) · Heureka Business Solutions GmbH

Oct 2021 – Present · Pfullingen, DE

Front-end Developer (Freelance), Oct 2021 – Oct 2022; Front-end Developer (Full-time), Oct 2022 – Jan 2026; Senior Front-end Engineer (Freelance), Feb 2026 – Present

- Top contributor to LOS with ~6,500 commits over 5 years, delivering 40+ modules for warehouse, transport, and finance operations with React, Redux Toolkit, React Query, and MUI.
- Delivered client-specific solutions for Siemens (Nuremberg, Singapore), Loxxess, Bewital, and ZooRoyal, rolling out site instances in Germany, Singapore, Mexico, and Brazil with site-specific KPIs, dashboards, and warehouse layouts.
- Built a configurable widget and dashboard framework with per-user saved settings, date-range filters, export, sanity checks, and aggregations, powering real-time, daily, and analysis dashboards across all client sites.
- Developed a Layout Builder and Heatmap Builder for warehouse floor plans (area templates, aisle configuration, zoom/pan), delivering custom layouts for Siemens and Loxxess sites.

- Built operational monitoring and business modules, including Control Tower shipment tracking with SLA timing, Packing Monitor, Trucks on Site, Digital Billing & Price Sheets, and a Ticketing System, plus Leaflet map views, ApexCharts dashboards, and a full-screen slideshow mode for shop-floor displays.
- Integrated Azure AD SSO (MSAL) with role-based permissions across navigation, pages, and actions, and API-driven multi-language support with i18next.
- Improved performance and data handling: lazy-loaded routes and dialogs, virtualized large tables (react-window, react-virtuoso), reduced bundle size, migrated the build to SWC, and evolved server state from SWR to React Query alongside Zustand.

Technical Leader · DevBlock Technologies

Jun 2019 – Oct 2022 · Ho Chi Minh City, VN

Promoted from Front-end Developer (2019) to Senior Front-end Developer (2020) and Technical Leader (2021)

- As Technical Leader of the 10-person front-end team, set technical direction for engineers working on separate projects, shared knowledge and best practices, and helped them resolve technical issues in their projects.
- Worked on 6+ client and internal projects across healthcare, education, public safety, consumer services, and more, using React, Vue.js, Redux, and TypeScript.
- Developed front-end features for Talosix, an AI-powered clinical trial platform for patient recruitment, screening, and research data management, over one year, focusing on its dynamic form builder.
- Built multiple modules for LinkIt!, a K-12 assessment management and data analytics platform, covering test taking, grading, and administration.
- Built Canari, an on-demand cleaning service booking platform, from scratch and handed it over to the client within 6 months; also contributed to Snopac 911, an internal emergency dispatch system for recording and assigning 911 calls, and BeautyTab.
- Ran hiring interviews, established the team's code review process, and estimated project timelines; mentored 2 developers from junior to mid-level.

Earlier experience

Front-end Engineer · NHN Vietnam, Ho Chi Minh City — Aug 2017 – Apr 2019

Front-end Developer · IMAD Technology, Ho Chi Minh City — Mar 2016 – Jun 2017

SKILLS

Front-end	React, TypeScript, TanStack Query, Redux Toolkit, Zustand, React Router, Next.js, Vue.js
Data & UI	ECharts, ApexCharts, Leaflet, MUI, Tailwind CSS, react-window, i18next, Azure AD (MSAL)
Practice	Multi-tenant architecture, Role-based access, i18n, White-labelling, Web performance, Code review

EDUCATION

Bachelor's degree in Software Engineering
Saigon University, Ho Chi Minh City · Mar 2017

LANGUAGES

Vietnamese: Native
English: Limited working proficiency
